

GRNT APEX Playbook

One operating book for the MMA paper-trading aggregator that becomes B2B SaaS, then AMM liquidity. Working name eGRIND is retired.

Name

Primary product name: GRNT APEX. Terminal for leveraged combat-sports markets. eGRIND reads as casino grind and is dropped. Keep APEX for CPO decks and investor one-pagers.

Candidate	Use	Verdict
GRNT APEX	Product + B2B widget	Primary. Already in the deck language.
GRNT TAPE	Screener / live feed module	Secondary module name only.
GRNT RING	Consumer app skin	Backup if APEX collides.
GRNT EDGE	Quant layer / EV engine	Engine name, not the product.
eGRIND	Prior working title	Do not use externally.

Thesis (one line)

MMA fans will sit in a finance-grade terminal if the first version is paper money plus a route to a real book. Do not build an MGA book or an AMM until that conversion is measured.

LTS — four phases

Phase	Window	What ships	Money	Risk
1 Aggregator	Mo 1–3	Paper book, EV screener, copy feed, smart-route CPA	CPA 100–150 €	No licence, no float
2 B2B widget	Mo 4–12	White-label iFrame / SDK inside an MGA UI	SaaS 2–8 k€/mo + 10–20 % NGR	Operator owns KYC
3 AMM / Type 2	Mo 12–24	Own pool, funding rate, liquidation	Volume skim	Licence + capital
4 Overlay / exit	Y3+	Stream HUD, wallet ingress, multi-sport	Rev-share / M&A;	Scale, not product risk

MVP 0.1 — cut list

Layer	Full vision	MVP 0.1
Cash	Fiat/crypto wallets	Virtual 10 000. Real stake via affiliate.
Risk	Live AMM + liquidation	Static margin formula on the client.
Odds	Monte Carlo HPC	Historical heuristic + The-Odds-API.

Layer	Full vision	MVP 0.1
UX	In-book widget	Standalone PWA, dark terminal.
Social	Paid copy book	Public PnL board + 1-click copy of paper books.

Stack and four-week sprint

Next.js 14 + Tailwind + Zustand · FastAPI · Supabase (auth, RLS, realtime) · Vercel / Render. One full-stack owner. No Web3 in phase 1.

Week	Done when
1 Infra	Schemas live. Odds cron writes market_odds. Google auth + 10 000 virtual.
2 Quant	EV + quarter-Kelly. Open/close paper position. Admin resolve after the card.
3 Terminal	Screener, trade slip, leverage slider, heatmap, live copy feed, leaderboard.
4 Route + live	Best-book CTA with subid. E2E. Vercel prod. First paid X/Telegram test.

Pay the builder in four milestones: 20 / 30 / 30 / 20. Micro-test 100 € before hire.

Budget

Line	MVP 0.1 €	Full book + Type 2 €
Build	6 000	50 000+
API + infra (2 mo / run-rate)	300	5 000 / mo
Legal / licence	0	~170 000
GTM test / networks	3 000	95 000+
Reserve	700	—
Total	< 10 000	~320 000

Phase-1 KPIs (first 10 days live)

Metric	Bar	Why it matters
Active paper traders	500	Demand for the UX, not the brand.
Session length	> 8 min	CPO argument vs 45-second slip.
Smart-route CTR	> 15 %	Cash proof without a licence.

GTM

Skip TV and bonus-war affiliates. Hit crypto-MMA overlap on X and Reddit (r/sportsbook, r/mma). Rev-share with existing tip channels on Telegram. Leaderboard is the organic engine. CTA only after a paper book is built: best combined price + CPA link.

Partners

Seat	Name / type	Role in phase 1–2
Odds feed	The-Odds-API	Lines only. Not Sportradar until phase 2 volume.
Book CTA	Unibet first, then 2–3 MGA books	CPA. Do not promise exclusivity.
Auth / cash later	Revolut Metal	Phase 2–3 hook: locked 50 € margin + Pay N Play. Not MVP.
Talent	EE / PL / RO full-stack, Lemon.io or direct GitHub	6 k€ + 3–5 % option if B2B converts.
Do not chase now	DAZN, Evolution, Kambi	Phase 4 names. Using them in phase 1 weakens the pitch.

CPO argument (APEX vs slip)

Metric	Legacy slip	APEX	P&L;
UX	1X2 coupon	Leverage, heatmap, copy feed	Stops bonus-only acquisition
Hold	4–6 % singles	15–25 % packaged books	Hold lift if parlays actually convert
Session	~45 s	12–18 min target	More touches per card
Tase	House vs player	Phase 1: zero. Phase 3: AMM	Do not sell AMM as live in MVP
Integrate	Backend swap	iFrame / SDK	Days, not quarters

Do not put €539 M NPV or 11.6x GGR in a first CPO email. Those numbers are model output, not evidence. Lead with session time, CTR, and hold mix from a live paper book.

Rules of engagement

- No player funds on GRNT rails in phase 1.
- No MGA application until phase-1 KPIs clear.
- True odds in MVP are heuristics, labelled as such. Do not market them as a priced edge.
- Affiliate links must disclose. CPA is the only cash line until a signed SaaS.
- Copy-trading is paper only until the operator owns the stake.
- Revolut, DAZN, yield farming stay on the LTS page, not the sprint board.
- One product name in public: APEX.

Next actions

1. Freeze APEX as the name. Archive eGRIND.
2. Stand up the monorepo and Supabase schema from the existing DEV-book. Do not rewrite it.
3. Run the 24 h paid micro-test before locking the 6 k€ sprint.
4. Register 2–3 affiliate accounts (Unibet-class) before week 4.
5. Write the CPO mail from the matrix above. No valuation slide attached.
